The following is a copy of a letter received from

" It has come to our attention that the following named persons of your organization are delinquent in their lodging charges:

FOIAb3a

<u>NAME</u>	<u>MONTH</u>	<u>NO. OF DAYS</u>	<u>CHARGE</u>
	July	13	\$ 16. 25
	September	15)	
	October	3)	\$ 22. 50
	July	5	\$ 6. 25
	July	10	\$ 12. 50

" It would be appreciated if you would personally assure payment as soon as possible. We suggest that you pay these charges and then submit the claim to your company as we are under severe criticism from the Auditors because of these overdue charges."

Detachment A states that by replacing the delay lines in the information amplifier the gains are brought back to normal. The reason for this is that the delay lines are decreasing in delay with age. The exact cause of the decrease in delay is not known. Since the stretching circuit operates on a pulse equal in width to the amount of delay in the delay line and nominally charges the stretching capacitor to about 10 percent of the peak amplitude in 0.25 microseconds, any percentage decrease in delay will result in an equal percentage decrease in gain.
